Arne & Arne S

Building on a Classic

A modernist design and 21st century LED technology still define the Arne line, inspired by the work of renowned Danish architect and designer Arne Jacobsen. But now the line is expanded to give lighting and landscape designers a greater range of choices, including the smaller-scaled Arne S, to appropriately and beautifully light outdoor environments—dramatically or subtly, from large spaces and walkways to architecture and landscaping.

Choice Defines the Arne & Arne S Family

Arne and Arne S luminaires share a formal simplicity that has international appeal and complements both traditional and contemporary architecture. Single, double, and multiple luminaires can be mounted to a pole or to arms in 13.8 ft (4.2m), 16.4 ft (5m), 19 ft (5.8m), 25 ft (7.6m), and 30.2 ft (9.2m) pole heights. Wall mount and catenary options are also available. The smaller Arne S luminaire creates intimate light experiences that bring the ambiance of indoor lighting to the outdoors. The line includes pole-mounted luminaires at 11.2 ft (3.4m), 13.8 ft (4.2m), 16.4 ft (5m), and 19 ft (5.8m) as well as catenary and surface-mounted luminaire options.

Multiple asymmetric and symmetric distributions, a range of mounting styles and outputs, clear and diffused lenses, and shielding are among the choices the lighting family gives designers to create distinctive outdoor visual experiences.

Arne and Arne S lights have a powdercoated aluminum silver or dusk finish, are UL listed and meet RoHS guidelines.

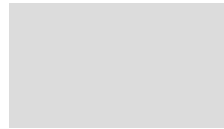

Materials

Neutral Series - Powdercoated Metal* (Poles Only)**

BLK (Gloss Black)

SIL (Silver Metallic)

TNM (Titanium Metallic)

Architectural Series - Powdercoated Metal* (Fine Texture, Poles Only)**
