STRATA

Visionary. STRATA is a genuinely original collection of benches and tables that re-envision what cast concrete site furniture can be. Designer Jess Sorel made beautiful use of Landscape Forms' proprietary MeldStone™ Ultra High Performance Concrete technology to create forms that are thin and strong, while visually fluid and light. STRATA includes a straight bench with and without back and a six-sided table. Asymmetry adds interest and utility. Tables in multiples create cell-like structures that in addition to their usual function break up space and serve as seating islands.

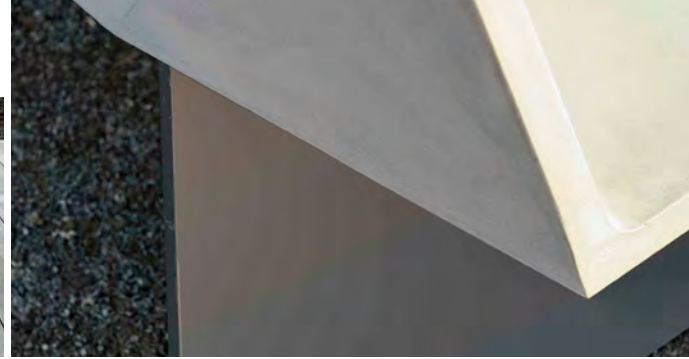

Intriguing From Every Angle. STRATA comes alive at the faceted intersections where lines, planes and surfaces meet. Dynamic STRATA furniture elements present a changing face as people move around them in the landscape.

Solid and Serene. STRATA's strong horizontal planes and large flat surfaces give it a clean modern simplicity harmonious with diverse architectures and spaces. The bench is 84" long, thicker at the center and progressively thinner toward the edges. The seat extends past the steel base, making it appear to float and a cutout in the back of the bench provides views through to the landscape. STRATA's combination of sweeping planes and robust, rooted structure imparts a sense of presence and serenity.

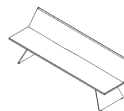

MeldStone is a material engineered by Landscape Forms that uses state of the art Ultra High Performance Concrete (UHPC) technology innovations in chemistry, mixing, molding and curing methods, making it possible to cast thinner cross sections with higher abrasion resistance and lower permeability than ever before. MeldStone components are monolithically cast with integral color, and are rigorously tested for optimal performance.

MeldStone has been engineered as a UV stable outdoor material with sealer technology capable of use in managed spaces and food courts.
